DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3-6, 8-12 and 14-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Kato et al. (US 5,416,669).

Regarding claim 1, Kato discloses (fig 6) a light emitting apparatus with a body having walls defining a source focal point and target focal points adjacent opposite ends of the body and a light source disposed within the body at the source focal point.

Regarding claim 3, Kato discloses the light source extends between two electrodes.

Regarding claim 4, Kato discloses the body further comprises glass (51).

Regarding claim 5, Kato discloses the body is defined by a central cavity at the source focal point.

Regarding claim 6, Kato discloses walls defined by a first and second overlapping semi-ellipsoids with opposite ends defined by conical end portions extending from the ellipsoids.

Regarding claim 8, Kato discloses the light source extends between two electrodes.

Regarding claim 9, Kato discloses the body further comprises glass (51).

Regarding claim 10, Kato discloses the body is defined by a central cavity at the source focal point.

Regarding claim 11, Kato discloses the first and second semi-ellipsoids each having distal ends opposite a first focal point and a target focal point proximate each distal end.

Regarding claim 12, Kato discloses the first and second ends are defined by a semi-minor axis of the first and second semi-ellipsoids.

Regarding claim 14, Kato discloses the light source extends between two electrodes.

Regarding claim 15, Kato discloses the body further comprises glass (51).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 2, 7 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kato et al. (US 5,416,669) in view of Parkyn et al. (US 5,926,320).

Kato discloses all of the above claimed limitations, but fails to clearly point out using a filament.

Parkyn discloses using a filament in order to produce light at a high efficiency.

Hence, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use the lamp of Kato with the filament in order to produce light at a high efficiency, as taught by Parkyn.
